

Advanced Procedural Programming

Lab 2

Structures and File Writing

Write a program that defines the following structure to hold company details:

- Company Name
- Company Registration Number (Assume Integer)
- Company VAT Number (Assume Integer)
- Average Sales per Month (A float array of values – 1 per month)

The program should prompt the user to enter the number of companies they wish to store in the file. The program should then read in the companies and append the contents to file.
